Jason R. McGinn

IT Coordinator / Systems & Infrastructure Administrator

mcginn@netstatedata.ca · netstatedata.ca

SUMMARY

Systems and infrastructure administrator with 18+ years across networking, systems, cloud, and automation. I secure and modernize the environments I run, from Active Directory and Microsoft 365 to firewalls, virtualization, and backup and recovery, with security as the thread that ties it together and everything grounded in documented policy. I build systems that are easy to manage and built around the people who use them.

Core Technologies: Azure · Microsoft 365 · Entra ID · Active Directory · Group Policy · Intune · Windows Server · Linux · VMware · Hyper-V · Cisco · WatchGuard · VLANs · Firewalls · VPN · PowerShell · Python · SQL Server · Veeam · Backup & DR · Incident Response · Security Hardening

TECHNICAL SKILLS

Cloud: Hands-on across Azure, infrastructure automation, data migrations, IaaS/PaaS, and identity management; working familiarity with AWS and Google Cloud.

Microsoft Platforms: Active Directory, Group Policy, Entra ID, and Microsoft 365 administration, with security hardening and automated policy and task deployment across Windows Server and client fleets at scale.

Networking: Routing, switching, VLANs, subnetting, firewalls, and WAN across wired, wireless, and multi-site environments; monitoring with SNMP, SolarWinds, and Snort; multi-vendor, including Cisco and WatchGuard.

Virtualization: VMware, Hyper-V, and Citrix, plus containers (Docker, Kubernetes), with virtual networking, storage provisioning, and resource allocation.

Linux: Advanced command line for administration, networking, and virtualization; hardening with SELinux, Fail2Ban, and iptables, including custom port-knocking for secure remote access.

Security & Resilience: Incident response, backup and disaster recovery, least-privilege access, and endpoint protection (Microsoft Defender and others); Veeam backup.

Data Management: SQL Server administration, tuning, migrations, and backup/recovery; reporting built directly from data via SQL, PHP, and Crystal Reports; Azure Data Lake, SQL Database, and Blob Storage; familiar with Power BI.

Artificial Intelligence: LLMs and SLMs via local, containerized, and cloud deployment; tested custom API integrations into command line and web applications; prompt engineering.

Training & Development: IT instruction from classroom teaching to onboarding and procedural documentation.

CERTIFICATIONS & EDUCATION

- Microsoft Azure Fundamentals (AZ-900), 2023
- Dynamics 365 Finance & Operations Fundamentals, 2022
- CompTIA A+, 2010
- Instructional Certification, New Brunswick Talk About Teaching, 2009
- Information Systems Specialist Diploma, 2001-2002

WORK EXPERIENCE

Technical Service Representative (Level II), Xerox 2024-Present

- Diagnose and repair office and production printing systems, minimizing customer downtime; certified on 114 printer models.

- Configure and troubleshoot networked printing environments, including file share and scan to email.

Infrastructure Consultant, Thinkmax 2021-2023

- Designed enterprise infrastructure for Microsoft Dynamics 365 migrations.
- Integrated Azure services and built DevOps deployment pipelines for streamlining release cycles.
- Managed development to production environments, including Azure Data Lake and SQL administration.
- Collaborated with developers, management teams, and clients to deliver production ready solutions.

IT Consultant, Vision33 / Absolute Computer Solutions 2017-2021

- Recovered a client from ransomware with no ransom paid: contained it, restored from backup in 6 to 8 hours, and fixed the root causes with Group Policy and least-privilege access.
- Ran a zero-downtime server refresh (new ESXi host, RAID 10, rebuilt VMs, domain-controller cutover), with backups test-restored before retiring old hardware.
- Traced recurring VoIP call drops to firewall and QoS behavior and restored call quality without disrupting other traffic.
- Delivered managed IT across dozens of clients: networking, virtualization, and backup and recovery.

Network Administrator, Imvescor 2014-2017

- Managed a 30+ user office network in Moncton, coordinating with the Montreal head office.
- Built a site-to-site IPsec VPN to head office, tested offline in an emulator before an after-hours cutover.
- Configured Cisco equipment via console; diagnosed outages and security issues to cut downtime.
- Delivered network upgrades and deployment automation.

Business Analyst, Blue Cross 2012-2014

- Developed SQL queries across enterprise databases containing pharmaceutical claims and patient records to analyze business data.
- Created reports that transformed raw data into actionable insights for decision makers.

Network Administrator, Maritime Door & Window 2010-2012

- Managed infrastructure and user support for a 20+ employee manufacturer.
- Cleared a four-hour switching-loop outage, then rebuilt the network with labeled, documented cabling and managed-switch hardening (root bridge, disabled unused ports).
- Built a companion database and PHP reporting tool for the Syspro ERP, improving departmental efficiency.

Instructor & Network Administrator, Eastern College 2008-2010

- Taught the Information Systems Specialist program to 100+ students.
- Automated account creation for 30+ new users monthly.
- Ran an application that required local admin under standard student accounts by granting only its needs via Group Policy.
- Built a custom Excel course for a regional accounting firm; managed network infrastructure and security.

Database & Systems Technical Representative, Kroll 2004-2008

- Supported Kroll, pharmacy management software that runs the pharmacy function, including drug plan deals and patient management.
- Troubleshot and resolved issues across the application's databases and underlying systems.

Windows XP Support, Level III (R&D), Convergys 2003-2004

- Provided Level III support for Windows XP within Microsoft's research and development program, the top escalation tier for complex operating system issues.
